Abstract (en)

[origin: JP2020014847A] To provide an interface for a floor treatment device 2 comprising a base device and an attachment capable of being connected to the base device. SOLUTION: An interface includes: an interface outside member; and an interface inside member 6 formed so as to have a shape corresponding to that of the interface outside member. The interface inside member 6 includes: a suction duct 7; and a contact carrier that is disposed outside the suction duct and comprises a plurality of corresponding electric contacts 9, 10, 12, 13. The interface outside member has a plurality of corresponding electric contacts. In order to permit a predetermined combination of the base device and attachments, the interface outside member and the interface inside member 6 further include at least two shape-coded element pairs. The interface outside member has a first shape-coded element pair that is formed so as to have a position and a shape corresponding to those of a first shape-coded element pair of the interface inside member 6.
