Abstract (en)

[origin: EP3608287A1] A capping machine (1) has at least one gripping device (25) moving along a path (P) and receiving one corresponding cap (2) to be screwed onto a product container (3); the gripping device (25) includes two carts (25a, 25b) that move along respective track portions (39a, 39b) parallel to a screwing stretch of the path (P); and one of the carts (25a) is movable relatively to the other (25b) when the gripping device (25) moves along the screwing stretch, so that the cap (2) has a screw motion toward the product container (3).
