Abstract (en)
A rolling shutter (100) for windows comprises: adjustable slats (1), actuation means (3) comprising modular elements (31) connected in such a way to form two vertical chains (30), a plurality of caps (12) disposed in an end opening of the adjustable slats (1) and revolvingly connected to a modular element (31) of the actuation means, a winding shaft (2) connected to the chains (30). Each cap (12) comprises: a first element (13) inserted into one of the end openings of the adjustable slat (1), a second element (14) connected to the modular element (31) of one of the chains (30), and coupling/uncoupling means (15) configured in such a way to couple/uncouple the first element (13) to/from the second element (14) of the cap (12) when the rolling shutter is installed in the window.
