Abstract (en)
[origin: EP3608513A1] A gas turbine engine (20) includes a compressor section (24) and a turbine section (28). The turbine section (28) includes at least one rotor and at least one blade (102) extending radially outwardly from the rotor to a radially outer tip (103). A blade outer air seal (104; 300) is positioned radially outwardly of the radially outer tip (103) of the blade (102). The blade outer air seal (104; 300) has forward and aft hooks (106, 108), and the forward and aft hooks (106, 108) are supported on forward and aft seal hooks (112, 114) of an attachment block (110). The blade outer air seal (104; 300) is formed of a plurality of laminate layered with a central web (109) formed of a plurality of laminate members including an inner reinforcement member (150). An outer overwrap (152) wraps around the inner reinforcement member (150). A method is also disclosed.
