Abstract (en)

[origin: WO2018189195A1] An apparatus (1) is arranged to volatilise or extract at least one component of smokable material. The apparatus (1) comprises, a housing (20) for receiving smokable material; a fluid container (40) arranged to hold a fluid (45); and at least one tube (60) arranged at least partially within the housing (20). The apparatus (1) is arranged such that the tube (60) enters smokable material or the smokable material enters the tube (60) when said smokable material is received within the housing (20) and such that in use, fluid (45) from the fluid container (40) passes through an exit aperture (62) of the tube (60) into said smokable material. The fluid (45) that passes into the smokable material volatilises or extracts at least one component of the smokable material.
