Abstract (en)

[origin: WO2019211124A1] The invention relates to a pole handle (1), for example for alpine ski poles or cross-country ski poles, having a handle body (3) and a hook-like device (14) for fastening a hand-retaining device (69), wherein, in the region of the hook-like device (14), displaceable latching means (7) are arranged in such a way that an eye-shaped device (70), which is inserted from above and is provided on the hand-retaining device (69), is fixed in a self-latching manner. The hook-like device (14) is arranged on the pole handle (1) on the side of the hand in the upper area (31) and comprises a holding mandrel (14) which is offset from the handle body (3) to form an insertion slot (71) to the side of the hand (44), wherein the latching means are designed in the form of a retaining lug (9) which, in the downward direction, defines an area (15) for the eye-shaped device (70), which is restricted against a force. The invention is characterized in that an upper area (66) of the holding mandrel (14) or holding pin or the entire holding mandrel (14) or holding pin can be deflected laterally (72) on both sides against a restoring force when viewed in the running direction (30).
