Abstract (en)

[origin: WO2018189119A1] The facility (2) for controlling the tension of and winding a metal monofilament (4) comprises: - a device (6) for controlling the tension of the monofilament, - a device (8) for winding the monofilament. The control device (6) comprises: a frame (10), a control pulley (12) that is free to move under the effects of the tension of the monofilament (4) and the weight of the control pulley, means (16) for detecting a critical threshold of an indicator of the winding tension of the monofilament (4). The winding device (8) comprises: a winding spool (18) and driving means (22) for rotating the winding spool (18). The facility (2) comprises means (24) for controlling the driving means (22) in such a way as to reduce the speed of rotation of the winding spool (18) when the indicator reaches the critical threshold.
