Abstract (en)
[origin: WO2018189168A1] The present invention relates to a power screwdriver (1) with a drive part (3) having a drive device and with a transmission part (7), wherein the transmission part (7) transmits a rotary movement of the drive device to an output shaft (9), and wherein the drive part (3) is connected to the transmission part (7) via a pivot joint (5), via which the drive part (3) is rotatable with respect to the transmission part (7), wherein the pivot joint (5) has a fixing device (19), via which the pivot joint (5) is blockable, and the pivot joint (5) has an input shaft journal (29) and an output shaft (31). The fixing device (19) has an actuating element (45), which connects the input shaft journal (29) to the output shaft (31), wherein, when a threshold value of a counter torque applied to the output shaft (31) is exceeded, the actuating element (45) actuates the fixing device (19) for blocking.
