Abstract (en)
[origin: US2018290805A1] A support tray configured to support at least two different diameter cylindrical containers. The support tray includes a generally planar body with opposed support surfaces. A plurality of projections extend from at least one of the support surfaces. Each of the projections defines at least one engagement surface such that the engagement surfaces define a plurality of first rim receiving areas having a first diameter and a plurality of rim receiving areas having a second diameter distinct from the first diameter.
