Abstract (en)
[origin: WO2018191512A1] Systems and methods for processing debris from job sites are disclosed. Carts for receiving the debris are also disclosed. Each cart has a base, a plurality of wheels extending downwardly from the base relative to a vertical axis, and a plurality of walls extending upwardly from the base. The walls and the base of each cart cooperate to define a debris- receiving space. The carts can be engaged by a lifting apparatus that rotates along an arcuate path to position the carts in an unloading position. The carts can be associated with unique identifiers that can be linked with cart-specific information during the course of debris processing.
