Abstract (en)
[origin: WO2018189268A1] The present invention relates to a stirrup leather comprising a strap (40) provided with a lower part (41) that can be connected to a stirrup (50) and an upper part (42) capable of forming a bend around a saddle (1) buckle (30) by forming a first portion (43) and a second portion (44), the second portion (44) comprising a distal end (45) of the strap (40) and being folded towards the first portion (43), characterised in that it comprises a stop member (60) borne by the second portion (44) of the upper part (42) and configured to be applied on the buckle (30) against a pulling force on the strap (40) directed towards the lower part (41) to attempt to prevent spacing apart of the lower part (41) relative to the buckle (30).
