Abstract (en)
[origin: WO2018188888A1] The present invention relates to a device for bending glass sheets, comprising - a lower press-bending mould (1) with a frame-like contact surface (2), - an upper press-bending mould (3) arranged opposite the contact surface (2), wherein the lower press-bending mould (1) and the upper press-bending mould (3) are suitable for deforming a glass sheet (I) located between them by pressing, wherein the side edge (S) of the glass sheet (I) lies on the contact surface (2) along a contact line (4), wherein during the pressing the contact line (4) migrates from a first contact line (4A) to a pressing line (4B), and wherein between the first contact line (4A) and the pressing line (4B) the contact surface (2) is formed as convexly curved.
