Abstract (en)
[origin: WO2018188836A1] The invention relates to a toilet cistern (1) comprising a wall (2) forming a substantially rectangular water tank (3). A supply line (5) is guided through the wall (2) and used to fill the water tank (3). A shut-off valve (7) is arranged in the supply line (5), said shut-off valve cooperating with a disabling device (8) that triggers the shut-off valve (7) when a disabling level (14) is reached in the water tank (3). An injector (15) is arranged in the water tank (3) in a space (13) above the disabling level (14). The outlet (16) of the injector (15), on the outflow side, leads out of the water tank (3).
