Abstract (en)

[origin: WO2018189446A1] The invention relates to a tent (10, 110, 210) comprising a structure (12, 112, 212) having at least one first passage, a first elastic return element having a first end part (26a, 126a, 226a) and a second end part (26b, 126b, 226b) that is at the opposite end from the first end part and cooperates with the structure, and at least one first retractable guy line (28a, 128a, 228a) for keeping the structure on the ground, having a first portion configured to cooperate with the first end part (26a, 126a, 226a) of the first elastic return element and a second portion intended to be secured to the ground, the first retractable guy line passing through said first passage, said first retractable guy line comprising a deployed position in which the first elastic return element is under tension and in which the first portion and the second portion of the first retractable guy line extend on both sides of said first passage, and a retracted position in which the first elastic return element is slack and in which the distance in question between the second portion of the first retractable guy line and the first passage is less than said distance when the first retractable guy line is in the deployed position.
