Abstract (en)

[origin: WO2018189445A1] A lubrication circuit for a combustion engine of a motor vehicle positioned at a longitudinal end of the engine turned toward the coupling face (100) of the engine, comprising: - a supply duct (21) for oil to a cylinder head, recessed in a cylinder casing, - a high-pressure pump (20) lubrication duct (25) activated by a cam solidly attached to an engine crankshaft, - an orthogonal longitudinal main oil supply ramp (20) connected to both ducts, characterized in that the supply duct (21) extends substantially parallel to the coupling face (100) in the extension of the lubrication duct (25) at one end of which an oil flow reduction nozzle (30) is arranged.
