Abstract (en)
[origin: EP3611436A1] An outdoor unit of an air-conditioning apparatus includes a casing, a compressor disposed on a bottom of the casing, a noise isolation unit, and an anti-vibration cushion. The noise isolation unit is disposed to cover the compressor and is a box-shaped component reducing or eliminating outward propagation of noise generated during operation of the compressor. The anti-vibration cushion is interposed between the compressor and an inner surface of the noise isolation unit, and is a component preventing vibration of the compressor during transportation of the outdoor unit. The outdoor unit further includes an attention-attracting section giving removal instructions for removing the anti-vibration cushion.
