Abstract (en)

[origin: US2018295940A1] A bootie for use in a footwear item, a method of making the bootie, and a footwear item including the bootie are provided. The bootie provides the upper of the footwear item that will surround the wearer's foot. The bootie includes a body formed from a single air permeable, moisture vapor permeable, and waterproof sheet formed from a plurality of layers of material laminated together. The body has a bottom portion that is located under a wearer's foot in use. The body defines an opening through which a wearer's foot will extend when in use. A single bottom seam extends substantially an entire length of the bottom portion of the body between a toe-end and a heel-end of the body.
