Abstract (en)  
[origin: WO2018192969A1] The invention relates to a rack for a cabinet, preferably a corner cabinet, comprising at least two shelves, which can be rotated about an axis and can be slid transversely to the axis. The shelves can be operated independently of each other, can be arranged one over the other, and can be slid on shelf supports. The shelves are mounted on the shelf supports in such a way that rotation by 360° is enabled. Each shelf not mounted on a bottom of the cabinet is mounted on at least one support, which can be fastened to a stable wall in a rear region of the cabinet and is arranged in such a way that the height of the support can be varied.
