Abstract (en)

[origin: WO2018215105A1] The invention relates to a device for the hot-dip galvanizing of components, comprising a galvanizing tank for holding the zinc melt in a tank interior formed by a wall of the galvanizing tank, according to the invention a monitoring apparatus being provided for monitoring the wall thickness of the wall of the galvanizing tank during the galvanizing operation. The invention further relates to a corresponding method for hot-dip galvanizing.
