Abstract (en)
[origin: WO2018192608A1] The subject matter of the invention is a method and a locking device (1) for a motor vehicle, in particular a bonnet lock, having a locking mechanism with a rotary latch (3) and at least one pawl (4), a locking pin (11) and an ejector (6) interacting with the locking pin (11), wherein the locking pin (11) can be brought into a lifting-off position (A) by means of the ejector (6), and with at least one electrically actuable means (21) for moving the lock holder (11) from the lifting-off position (A) into a locking position (HR), wherein a drive lever (5) is provided, and wherein the ejector (6) and, at least indirectly, the rotary latch (3) are actuable by means of the drive lever (5).
