Abstract (en)
[origin: WO2018192630A2] On the basis of prior art in which until now only vending machines for single provision of goods or commissioning systems for grouping orders consisting of different goods are known, the vending machine (1) according to the invention combines the advantages of these two systems originating from different fields, wherein said vending machine (1) is provided on its front side (3) with a touch display (5) for accepting orders of in each case individual or several products, i.e. also orders including baskets of goods, and is provided with a payment terminal for conducting cashless payment and a goods output, wherein the inner life of the vending machine (1) consists of a fully automatic roller cabinet system (14) which is organized in a chaotic storage and from which the ordered products can be autonomously removed by means of one or a plurality of gripping arms (20) and can be supplied individually or together to a goods output.
