Abstract (en)  
[origin: WO2018192727A1] The invention relates to a pane having a heatable coating, comprising a substrate (1) and a heatable coating (2) on an exposed surface of the substrate (1), which heatable coating at least comprises: an electrically conductive layer (4), which contains a transparent, electrically conductive oxide (TCO) and has a thickness of 1 nm to 40 nm, and above the electrically conductive layer (4) a dielectric barrier layer (5) for regulating oxygen diffusion, which dielectric barrier layer contains a metal, a nitride, or a carbide and has a thickness of 1 nm to 20 nm, the pane having a transmittance in the visible spectral range of at least 70% and the coating (2) having a sheet resistance of 50 ohms/square to 200 ohms/square.
