Abstract (en)

A mixed smoking set for conventional cigarette and electronic cigarette, it comprises an electronic cigarette cartridge. A mouthpiece is provided above the electronic cigarette cartridge. A cigarette holder is provided below the electronic cigarette cartridge. A cigarette smoke passage of the cigarette holder extends into the mouthpiece through the electronic cigarette cartridge. Smoke passages respectively independent of each other are configured for smoke of a conventional cigarette and smoke of an electronic cigarette of this set, so that the problem of impact caused by the pollution of the smoke of the conventional cigarette on savoring and smoking taste of the electronic cigarette when used alone can be resolved. For the smoke of a cigarette, a tar and harm reducing mechanism can be utilized to effectively reduce hazardous substances such as tar in the smoke of the conventional cigarette, smoking is thus healthier. The mouthpiece has a smoke mixing structure, and thus can ensure that the smoke of the conventional cigarette and the smoke of the electronic cigarette can be sufficiently and uniformly mixed and then enter the oral cavity of a user when the two cigarettes are simultaneously smoked. When the cigarette holder is not used, the cigarette holder can be automatically closed by means of structure configuration, so as to ensure that airflow intake resistance is kept consistent when the electronic cigarette is used alone.
