Abstract (en)  
A sporting device includes a fixing structure, at least one wheel and an elastic assembly. The at least one wheel is disposed on the fixing structure. The elastic assembly is disposed on the fixing structure and selectively linked with the at least one wheel. When the at least one wheel is unlinked with the elastic assembly, the elastic assembly would not be driven by the at least one wheel, when the at least one wheel is linked with the elastic assembly, the elastic assembly storages a force by driving the at least one wheel.
