Abstract (en)  
[origin: CN110857510A] The invention relates to a laundry care device. The device comprises a washing drum, an appliance loading opening, an appliance door, an alkali liquor container and a control device, wherein the appliance door has a door inner side facing the laundry drum, and the alkali liquor container has a discharge opening; the laundry care device has an inlet nozzle, the discharge opening is fluidically connected to the inlet nozzle by means of a line, and a circulation pump is arranged in the line from the discharge opening for pumping washing liquid from the line and from the inlet nozzle. In a first operating mode, the circulation pump pumps the washing liquid from the line and from the inlet nozzle at a first flow rate within a first flow rate range, directly supplying the washing liquid to the laundry in the laundry drum. In a second operating mode, the circulation pump pumps the washing liquid from the line and from the inlet nozzle at a second flow rate within a second flow rate range, supplies the washing liquid to the inside of the door and removes contaminants from the inside of the door, the first and second flow rate ranges do not intersect, and the control device activates the first and second operating modes of the circulation pump.
