Abstract (en)

[origin: WO2018198028A1] A structure (4) for packing containers for pharmaceutical use (20 comprising a tray (8) accommodating and supporting a support plane (12) fitted with a plurality of seats (16) for accommodating containers for pharmaceutical use (20), the seats (16) having a cylindrical shape with respect to the main extension axes (X-X), parallel to each other. The seats (16) are delimited by perimeter walls (24) which project from the support plane (12) towards an upper side (28) of the structure (4). Advantageously, the perimeter walls (24) of adjacent seats (16) are mechanically connected to each other by a lattice structure (36) comprising a plurality of bridges (40). The lattice structure (36) defines, in the interstices (44) between the perimeter walls (24) of adjacent seats (16), a plurality of through-openings (48) through the support plane (12) so that it is pervious to the passage of an air flow that intersects said interstices (44) of the support plane (12).
