Abstract (en)  
[origin: WO2018197432A1] The invention relates to a porous monolith comprising between 20 wt.-% and 70 wt.-% TiO<sub>2</sub> relative to the total weight of the monolith, and between 30 wt.-% and 80 wt.-% a refractory oxide, selected from silica, alumina or silica-alumina, relative to the total weight of the monolith, characterised in that said porous monolith has a bulk density of less than 0.19 g/mL.
