Abstract (en)
[origin: WO2018222030A1] The present invention relates to a system comprising: - a treatment device, comprising: - a feed; - an elongate distributor; - wherein the feed is arranged above the distributor; and - a discharge conveyor located below the distributor, wherein a longitudinal direction of the distributor and a discharge direction of the discharge conveyor are at an angle relative to each other; and - wherein the angle between the distributor and the discharge conveyor defines a varying drop height between the distributor and the discharge conveyor; - wherein the treatment device is a homogenizing device, the discharge conveyor of which is drivable in a direction in which the drop height decreases; and - wherein a separating device is arranged downstream of the discharge conveyor of the homogenizing device.
