Abstract (en)

[origin: WO2018197293A1] The invention relates to a robot comprising: a system (101) for ascertaining information KE on mechanical contact events between the robot and an environment; a transformation unit (102) for transforming the ascertained information KE into feedback information FI reflecting said information KE, and a lighting means (103), disposed on the robot, in particular on a robot manipulator, for outputting light signals that are dependent on the feedback information FI.
