Abstract (en)

[origin: WO2018197200A1] The invention relates to a machining unit for machining the boundary surfaces of a body (07), wherein: the body has a lateral surface (54) and a base surface (27) as boundary surfaces; the machining unit has at least one machining station (02; 03; 04; 06) and at least one device for transferring the body (07) from a first machining position into a second machining position; the device has a gripping device (57) for gripping the body (07); the machining unit has two opposing elements (28; 29) of a clamping means; the body (07) in its first machining position is fixed at each of its end faces between the two opposing elements (28; 29) of the clamping means; the gripping device (57) is rigidly connected to a rotatable shaft (59); the body (07), picked up by the gripping device (57) and removed from its fixed state, can be transferred into its second machining position by means of a rotational movement of the shaft (59); and this body (07) is positioned on the machining station (02; 03; 04; 06) such that in its first machining position its lateral surface (54) is machined, and in its second machining position its base surface (27) is machined.
