Abstract (en)
[origin: WO2018197628A1] The invention relates to a housing case as a receiving chamber (100) for electrical components (80, 81, 82) in a tubular section (15) of a two-wheeled vehicle (1), the housing case (20) having a pre-defined axial length (L) between a first end (21) and a second end (22). The housing case (20) is open on the first end (21) and carries a clamping device (30) on the second end (22), which is fixed on the tubular section (15) in a clamping position (41) . The clamping device (30) can be moved into the clamping position (41) by means of a moving element (50), the moving element (50) being at an axial distance (v) from the first, open end (21) of the housing case (20). The axial distance (v) amounts to more than 50% to 100% of the axial length (L) of the housing case (20). The moving element (50) is to be moved from outside the housing case (20) by means of a tool (13) inserted into the first, open end (21) of the housing case (20).
