Abstract (en)  
[origin: WO2018198023A1] The disclosure relates to a closing member (20) for use in closing a package (10), the closing member (20) having, along a longitudinal direction (L), a tongue portion (21) configured to be inserted through a slot(14) in a wall (11b, 13') of the package (10) by a movement along the longitudinal direction (L), and a base portion (22), wherein the base portion (22) has a width (W22) across the longitudinal direction (L) being greater than a maximum width (W21) of the tongue portion (21) across the longitudinal direction (L), wherein the tongue portion (21) comprises an attachment portion (23) being configured to be adhesively connected to an outside surface (11b) of the package (10), wherein the attachment portion (23) is provided at a distance (D23) from the base portion (22), and wherein the tongue portion (21) further comprises a tear portion (24) extending across the tongue portion (21), whereby the tear portion (24) is configured to be torn to divide the tongue portion (21) into a first part comprising the attachment portion (23) and a second part connected to the base portion (22). The disclosure also relates to a packaging system comprising a package and a closing member.
