Abstract (en)

[origin: WO2018197330A1] The invention relates to a stun grenade (10) and particularly to the possibility of individual adjustment and situation-dependent adaptation of the number of active masses (7) in situ. The aim of the invention is to achieve the possibility of individual adjustment. To this end, a switch mechanism (11) is built into the stun grenade (10), enabling the simultaneous activation of different chambers (6) inside the stun grenade (10) in order to adjust the effect. The switch mechanism (11) is formed by a tube and peripherally integrated boreholes (13) and grooves (14). A different number of the chambers (6) in the stun grenade (10) is activated by the switch mechanism (11), thereby increasing or decreasing the active power.
