Abstract (en)
[origin: WO2018197349A1] The invention relates to a computer-aided system for supporting teamwork by means augmented reality (AR). According to one embodiment, the system comprises a production server, which is designed to store the three-dimensional geometry of at least part of a machine and a plurality of tasks. A spatial position in which the task should be performed and position-related information concerning the performance of the task are associated with each task. The system also comprises a plurality of user terminals, which are connected to the production server by means of a computer network, each user terminal being assigned to a person of a team. The production server is also designed to assign each person of the team a certain task, the position-related information associated with the task in question being displayed on the user terminal of the person in question.
