Abstract (en)

[origin: EP3616565A1] A hooking system for compensating panels comprises a hook (100) for support feet (400) having an anchoring portion (110) stably engageable in a reversible way with a preferably cylindrical side surface (411) of a support foot (400) for furnishing elements; and at least one respective component connection (200) having a connection portion (210) reversibly connectable to a respective compensating panel (300). The hook (100) and the connection component (200) have respective first and second magnetic attraction means (130, 230) mutually engageable to determine a stable connection of the compensating panel (300) to the support foot (400).
