Abstract (en)
[origin: EP3617054A1] The present invention discloses a water skateboard apparatus, including a loading component (2) and a number of skateboard bodies (1) that are pushed forward together, where a number of the skateboard bodies (1) are spaced apart, and the loading component (2) is detachably connected to top surfaces of a number of the skateboard bodies (1). The water skateboard apparatus of the present invention greatly increases the loading space of the water skateboard apparatus by the loading component (2) having a sufficient loading space. The propulsion power of the water skateboard apparatus is greatly improved by providing power through a number of the skateboard bodies (1). At the same time, the loading component (2) and a number of the skateboard bodies (1) can be installed and disassembled, which is convenient for transportation, maintenance and replacement.
