Abstract (en)

[origin: ES2745533A1] Procedure for putting into operation at least one cooking appliance. The present invention refers to a method for putting into operation at least one cooking apparatus (10a), in particular, of at least one cooking field, in which at least one cooking parameter is detected and in which, in at least a period of time (12a) of at least one automatic cooking process in which at least one cooking battery (14a) is heated, it is determined, depending on the cooking parameter, at least one heating power that has supplied to the cooking battery (14a). In order to provide a generic procedure with better properties relative to the comfort of use, it is proposed that, in the event that the determined heating power is greater than the maximum predetermined requesting heating power, which is less than the maximum power heating possible to heat the cooking battery (14a), the cooking battery (14a) is heated with the maximum predetermined heating power, and that the cooking battery (14a) is heated at atmospheric pressure in the cooking process automatic.
