Abstract (en)
[origin: WO2018202224A1] The solution relates to a pharmaceutical composition in the form of a film-coated tablet, characterized in that it comprises the active ingredient Deferasirox of formula (I), or its pharmaceutically acceptable salt, in an amount of 40% by weight or less, preferably 40% by weight, based on the total weight of the tablet core, and at least one pharmaceutically acceptable excipient. Another solution provides a process for producing film-coated tablets, containing Deferasirox as the active ingredient. Deferasirox exhibits a chelating effect on iron ions, which makes it useful for the treatment of chronic iron overload of the organism due to frequent blood transfusions.
