Abstract (en)

[origin: WO2018202914A1] The invention relates to a device for cushioning at least one object (12a-c) in a container (10a-c), comprising a cushioning material provisioning system (19) for the provision of cushioning material (28a-c) and a request means (25) which is coupled to the cushioning material provisioning system (19) and which outputs a signal to the cushioning material provisioning system (19) in order to request cushioning material (28a-c), the request means (25) allowing acoustic signals, in particular voice signals, to be converted.
