Abstract (en)

[origin: WO2018203016A1] The invention relates to a set of structural elements (1, 7) intended for being assembled to form an above-ground car park with at least one storey, said structural elements (1, 7) comprising so-called supported deck modules (1) and posts (7) for supporting same in assembled position. The set of structural elements (1, 7) is characterised in that the supported modules (1) comprise at least one recess (5) open at one end and capable of receiving the head of a post (7), and bearing means which are then capable of engaging with a respective post (7) by inserting the recesses (5) onto the respective heads so that the supported module (1) is supported in a stable manner.
