Abstract (en)
[origin: WO2018203080A1] A locking assembly for a door, having a keep and a lock body. The lock body has a locking bolt for engaging the keep and an automatic actuation mechanism for actuating the locking bolt. The automatic actuation mechanism has a trigger and a contact surface on the keep, and configured to compress the compressible trigger when the lock body is aligned with the keep. The locking assembly can actuate the lock bolts automatically upon closing of the door and the lock bolts can be retracted with a key. The locking assembly has a snib mechanism which prevents accidental actuation of the lock bolts.
