Abstract (en)
[origin: US2019068593A1] Methods and electronic devices are provided for providing a service update. First data including first information is received from a first external device as a second external device authenticates the electronic device as a target for an update of a first application program. A relevant interface is output by processing the first data. Second information related to the first application program stored in the electronic device is obtained in response to a user input applied to at least a partial area of the interface. Second data related to a request for the update of the first application program is transmitted to the first external device when the first information included in the first data corresponds to the second information.
