Abstract (en)
[origin: WO2018202445A1] The invention relates to a conductor connection terminal, which has at least one busbar piece, at least one clamping spring and at least one sleeve, wherein the clamping spring has a clamping limb oriented towards the busbar piece, wherein a clamping point for clamping an electrical conductor is formed between the busbar piece and the clamping limb, wherein the clamping spring has a spring bend that adjoins the clamping limb and a contact limb that adjoins the spring bend, wherein one or more first holding regions are formed on the clamping limb and/or on the contact limb of the clamping spring, by way of which holding regions the busbar piece and the sleeve are connected in form-fitting fashion to the clamping spring.
