Abstract (en)

[origin: WO2018203106A1] An apparatus, method, and computer program products are provided in reference to a nomadic multi-access edge computing device configured to be disposed on and carried by a vehicle along a route. The apparatus may obtain services, applications, or data from a terrestrial networking entity prior to travel along the route. The apparatus may cause a location of the vehicle to be reported during travel along the route, and in response to the location of the vehicle, may receive an update to the services, applications, or data during travel along the route. The apparatus may further provide access to one or more passengers of the vehicle to the services, applications, or data during travel along the route.
