Abstract (en)  
[origin: US2018325291A1] An expandable pillow cover includes a first layer and a second layer positioned opposite first layer to define an interior space therebetween. The first and second layers are joined to one another at at least junctures of at least two opposing openable sides, and at least two other sides, the at least two opposing openable sides being between the two other sides, wherein the openable sides and the other sides define four corners at which the first and second layers are joined to one another. Gusset panels are positioned between the first layer and the second layer in the interior space and adjacent the at least two opposing openable sides. At least two fasteners, one at each of the at least two opposing openable sides movable independently of each other between an open condition and a closed condition. The cover is adjustable between a first condition where one or both of the fasteners are fastened to contract its respective gusset panel and the interior space has a first volume, and a second condition where one or both of the fasteners are unfastened to expand its respective gusset panel and the interior space has a second volume greater than the first volume.
