Abstract (en)

[origin: WO2018206447A1] The invention relates to an oral care and cleaning agent which contains, in each case relative to the total weight of the agent, 1 to 10 wt.% cellulose particles obtained from bamboo and 1 to 20 wt.% precipitated silicic acid. The oral care and cleaning agent has an exceptional cleaning effect, in particular with respect to surface stains on the tooth surface and the removal of tartar, results in decreased abrasion of the natural tooth material (enamel), and has an excellent and non-powdery feeling in the mouth.
