Abstract (en)
[origin: WO2018206586A1] The invention relates to a device (1) for producing a padding cushion (11) from a single-layer or multi-layer continuous paper web (13), provided with a conveyor mechanism (3) for retracting the paper web into the device, a separating mechanism (5) for separating the padding cushion from the paper web, and control electronics (21) for actuating the separating mechanism according to a pre-determined movement profile, particularly a speed and/or torque profile, comprising a sensor for detecting a rotational angle position of the conveyor mechanism, the control electronics being designed to actuate the separating device for a discontinuous separating operation when a pre-determined actual rotational angle position is detected.
