Abstract (en)

[origin: WO2018234660A1] The invention concerns a device (1) for renovating a wall surface (2) by covering, the device (1) comprising a panel (3) intended to cover the surface (2) to be renovated, being held by at least one removable and repositionable attachment system comprising at least two strips provided with complementary coupling means (5, 5a) for coupling them together, including a support strip (4) intended to be attached to the surface (2) to be renovated, and a fastening strip (6) attached to a rear surface of the panel (3), the attachment system also comprising at least two profile sections (9) intended to be attached horizontally to the surface (2) to be renovated, covering at least the width of each of the ends of the support strip (4) in order to prevent said support strip (4) from starting to be torn off.
