Abstract (en)

[origin: WO2018206566A1] The invention relates to a scaffold transport system (10), having a rail system (12), which has at least one horizontally running rail section (20), and at least one carriage module (28), which is designed to move along the rail system (12). The carriage module (28) has a coupling section through which the carriage module (28) is captively and movably coupled to the rail system (12), and a carrier section (32) by means of which the carriage module (28) carries objects during the movement thereof.
