Abstract (en)

[origin: WO2018206893A1] The invention relates to a containment airlock (1), in particular an airlock for intervention on a site likely to be contaminated with radiation, asbestos and biological and/or chemical agents. The containment airlock (1) comprises a self-supporting frame (3) and a flexible containment shell (5). The shell (5) is configured to be assembled with the frame (3). The frame (3) is articulated so as to be extensible between a folded storage position and an extended intervention position. The frame (3) comprises articulated reinforcement rods (7). The articulated reinforcement rods (7) comprise rigid segments (72, 74) and at least one intermediate articulation (8) connecting the segments (72, 74).
